

## What is the IDDSI Framework?

Some people have problems feeding, chewing or swallowing. This means some foods and drinks are a danger for choking or for material to 'go down the wrong way' and into the airway.

The International Dysphagia Diet Standardisation Initiative (IDDSI), through consultation and following best practice principles, has developed a global standardized way of describing foods and drinks that are safest for people with feeding, chewing or swallowing problems. The Framework can be used for people of all ages, in all care settings and can be applied to all cultures.

Simple measurement methods are included in the Framework. These measurement methods confirm the IDDSI Level a food or drink belongs to, or if it is unsafe for people with feeding, chewing or swallowing problems.

The measurement methods are included on our handouts. We created these handouts in consultation with clinicians and patients. The handouts can be used by people who have feeding, chewing or swallowing problems, their caregivers and clinicians.

You can find out more about IDDSI at [www.iddsi.org](http://www.iddsi.org)
